

The SAS Travel Companion
C. Olivia Rud, "Conde" SAS Travel Magazine

There are three important steps in planning your SAS trip.

- 1) Define the PATH and determine the LOGISTICS. If you need help, you can refer to the many SAS catalogs.
- 2) Select the DATE and LENGTH.
- 3) Be sure your SAS SUPERVISOR will 'ok' it.

Before any long trip, you must pack your necessary data. For example, be sure to take your UPPERCASE. Avoid taking a LOWERCASE or you might end up having to compress your data. Also, be sure and pack your data cleansing supplies as well as a CLASS variable wardrobe including several STRING bikinis. However, if you have sparse data or your sample size is too large, full coverage might be right justified.

If you have the MEANS, you might want to utilize the AUTOEXEC taxi service. But be wary, this can consume a host of resources and has a reputation for FREQ accidents.

Now that you've submitted to your SAS trip, your off and running.

A favorite destination of many SAS travelers is the CPORT where the numeric and character data streams merge. This is a particularly beautiful with its many decision trees and pooled variances. It also has some highly acclaimed SAS libraries.

Your trip should also include a visit to the SQL restaurant located on the beautiful ChiSquare. It's a lovely structure with strong COLUMNS. When you first enter, you are facing the famous SCROLL BAR. The dining area is well known for ROWS of TABLEs with VIEWs and a delicious MENU. Their servers are highly efficient. And the portion sizes allow for many megabytes. The atmosphere is quite pleasant with a music program which includes a STRING quartet. It's especially cozy in the winter because of their use of LOG heat.

In SUMMARY, you'll be sure to have a pleasant trip if you let SAS guide your next journey. You know that if you overdo it, you can head straight for the gym. Goodnight!
